Mixed Algebra Review.

| | |
|---|---|
| 1. Solve the linear equation: $-5x + 11 = 36$ | 2. Solve the linear equation: $\frac{1}{2}x - 4 = 2x + 8$ |
| 3. True or False? $3x + 5 = y $ when $x = -9$ and $y = -22$ | 4. Simplify the radical. $\sqrt{27}$ |
| 5. Is the radical expression simplified? If not, simplify it. $-3\sqrt{8}$ | 6. Evaluate the radical expression. Write your answer in reduced radical form. $\sqrt{(-3)^2 + 9^2}$ |
